

BSI Custom Pro

Business is won on a cost-per-piece basis. Providing services in the most efficient manner is essential for survival. Utilization of equipment is critical as future growth is dependent on current machine load and functionality limitations. Satisfying current requirements without knowledge of future application changes has limited your business growth.

The BSI Custom Pro provides a standard non-intelligent machine supported on a design known for its market longevity. Supporting a wide range of insert and envelope sizes, multiple applications can be run 7x24 with limited changeover times. System functionality may be added when requirements or applications change. This enables added functionality to support applications outside your current capacity, without adding additional equipment.

Benefits

Low service and operating costs
Robust design- Expandable as required -Application flexibility

SPECIFICATIONS

Envelope Width 3.50" x 5.50" Length 7" x 12."

Inserts Width 3.50" x 2.50" Length 6" x 11."

Thickness – 3/8"

• STANDARD AVAILABLE FEATURES
